**NDCRS ARCHITECTURAL SITE FORM**  
**PAGE 3—Feature Data**Field Code Getchell HallSITS# 32 BA**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a one room prairie school sitting on a concrete foundation. The gable roof is covered with metal sheeting and the soffits are closed with metal as well. There is a red brick chimney near the east end of the roof. The building measures 40 feet east to west and 24 12 feet north to south.

This building is entirely covered with vertical metal siding. There is a newer entry door at the southwest corner, locked as well as newer entry door on the east side, also locked. There is a small concrete pad just outside this east door. Electric conduit and a meter are just to the right of the entry door and there is an outdoor light high on the east wall.

In conversation with a township board member I learned that the windows were left in place when the siding was put on in the 1980's. The windows are double hung and might have some glass left. There is a foyer inside the entry door and small rooms to either side were coat rooms. The flooring is tongue and groove hard wood. The walls are covered with wall board and wainscot finishes the lower 1/3 of the wall. There is blackboard on the west wall. An oil burner sits inside the south part of the school room and is used today.

A sign on the building says Getchell Hall 1883 to 1983.
