## 1. Feature Description, Integrity, Eligibility:

This feature is a one room prairie school on a foundation of concrete blocks. It was moved to a farm. The gable roof is covered with asphalt shingles. There is a short brick chimney at the peak of the roof near the center. The building measures 26 feet north to south and 22 feet east to west. The entry measures 8 feet by 10 feet.

The siding begins with a rake board under the eaves at the peak ends of the school. The remainder of the siding is 6 inch wood lap with 6 inch corner trim. An entry sits at the south end of the school. The door is wood paneled with a window at the top. An interior 3 panel wood door is locked where it goes into the school. The windows are all double hung with glass and they are all covered. There are three windows on the east side and three on the west side. According to the owner the interior is all original with a blackboard still in place. There was electricity. Heat was coal.

UPDATE

Field Code Newborg SchoolSITS# 32 BU X159Complete one Page 3 for *each* architectural feature at the site.

## 1. Feature Description, Integrity, Eligibility:

The feature is a two room consolidated school on a concrete block foundation. It was moved to this farm for preservation. The hip roof is covered with failing wood shakes with metal capping and finials. There is no chimney. At the front (west) of the school, above the entry, there is a cupola. The openings are arched on the top and there is a flag pole at the peak. The soffits are open. The building measures 33 north to south by 35 east to west.

The siding begins with a rake board on all four sides of the school. The rest of the siding is 6 inch wood lap with decorative corner molding. A waterboard finishes the siding. A bump-out arched entryway leads to double doors. The doors have windows on the top half, wood on the bottom. There is a vestibule just inside the doors with a closet straight ahead as you enter. There is a kitchen to the right and the coatroom is to the left. Access to the school is through the coatroom. Both the coatroom and kitchen have wainscot, none in the school room. The interior walls are lathe and plaster and wallboard with a picture rail on the northwall along with a blackboard. Wide trim boards finish the walls. The ceiling is lathe and plaster. The floor is tongue and groove hardwood and is beginning to buckle. 4 double hung windows are located on the south side, two more similar windows are to either side of the entry door and the east side has two pairs of newer double hung windows. All the windows have intact glass. Beautiful white glass light fixtures indicate electricity.

This school was built in 1915 and the school had classes for all eight grades plus two years of high school. The high school was discontinued in the 1930's and the school continued to operate as a one room school until 1957.

## 1. Feature Description, Integrity, Eligibility:

The feature is a one room prairie school on a concrete block foundation. This school was moved to a farm for use as a townhall. The chimney was removed. The gable roof of the school and hip roof of the entry are covered with wood shakes with metal capping and finials. The soffits are closed.

The siding begins with a rake board on the peak ends of the school and all three sides of the entry. The remainder of the siding is 6 inch wood lap with 6 inch corner trim. There is an entry with a 5 panel wood door. The entry has two 4 pane windows, one on the west and the other east. Two windows on both the east and west sides of the school are shuttered. Inside the school paneling was installed on all walls and the ceiling over the original lathe and plaster. They paneled right over the windows. The floor is carpeted tongue and groove hardwood. They saved one small blackboard and installed it in the school. There is electricity.

**NDCRS ARCHITECTURAL SITE FORM**  
**PAGE 3—Feature Data**Field Code MAC-NB-4xSITS# 32 BU**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

DESCRIPTION: The feature is a wood-framed, single-stall garage. The garage has horizontal drop siding with white paint, which has mostly peeled off and faded. A set of wooden sliding doors on a metal track is located on the north facade. There is evidence of wind damage as a small number of shingles are missing. The structure has no windows, has an electric hookup, open soffits, and sits on a concrete slab. It is currently being used as storage.

INTEGRITY: This feature maintains integrity of location, setting, design, materials, feeling, and workmanship.

ELIGIBILITY: Survey data are insufficient to determine significance. Therefore, the structure cannot be evaluated for eligibility on the National Register of Historic Places. Until a deed search can be performed and the site completely recorded, avoidance is recommended. Potential eligibility under Criteria C, and D is unlikely. Additional research is needed to determine potential eligibility under Criteria A and B.

## 2. Owner's Contact Information:

Private

## 3. Access (to rural areas):

From Newburg, ND travel north on 9th Ave NW. Feature is located approximately 0.5 miles north of 90th St NW on the east side of 9th Ave NW.

4. Site Area (ft<sup>2</sup>): 5385. Description of **SETTING**:

A view of up to three miles to the south and west is visible from the structure. A shelter belt is located to the north and east. There are 15 historic buildings east of the structure that have been moved from Newburg by both the current landowner, Lowell Larson, and his father. One of these buildings is the old Newburg opera house, constructed in 1908, which used to be located on Main St. The opera house was moved in 1973. It is likely that the other 14 buildings were moved from Newburg (approximately 1-2 miles south of the site lead) as well, but it cannot be confirmed at this time. The 15 structures are located well outside the project APE, and were therefore not investigated any further.
