NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature DataField Code Whitestone Township SchoolSITS# 32 DI**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a simple, wood framed one room prairie school sitting on a concrete foundation. The roof has very tired asphalt shingles over wood sheathing with some holes. The chimney is missing. The soffits under the eaves are open. The building measures 28 feet east to west and 30 feet north to south.

There is a wide header under the eaves of both peak ends. Most of the siding is 6 inch wood lap with metal corner caps. The north side of the school has about half the siding gone down to the underlayment. There is a bank of window openings on the east side with little framing and no glass. At the south end of the west wall is another small window opening with not glass or framework. There is about half a broken door on the south wall. Inside the door is an entry with two doors leading into the main body of the school at the east and west ends of the inside wall. There is wainscot in the entry, about half way up the wall to lathe and plaster the rest of the way. There are two 5 panel wood doors, both off the hinges. The floor is tongue and groove hard wood with much of the floor fallen in or gone. The main body of the school has lathe and plaster with wainscot. The ceiling has a web of 2 x 4's over lathe and plaster. Whatever they attached to the wood framing has all fallen in. There are no blackboards in the school but lack of paint on the north wall shows where it was. Light fixtures hanging from the ceiling shows the presence of electricity at some point.
