9, VIEW FR. FRONT ROOM TOWARDS ENTRY \*#.1 View from the south,....east-west road in the background....The building looks like it is in a low spot, and it is, water gets in the basement. Originally it was not a low spot, but when the new roads, the one in the background, and the north-south one to the immediate west of the school, were graded up, they were then higher than the level of the school by about four feet. The north-south road is a county road and was raised another two feet when it was graded up and paved about 10 years ago. In wetweather the school basement has three feet of water in it, and access is difficult to get in the building. The furnace (which would not have been useable) is ruined, and some desks that were stored there are beyond restoration. There are others that were stacked one on top of the other that just the bottom two are ruined..... The steps go to the entry that was constructed in 1925, when the addition was added: The door to the left, (boarded up) goes to the basement.All windows were boarded up, which has helped to preserve the structure.

PHOTOGRAPH KEY

## #2

East side, looking to the SW..(some sun reflection in lens of camera) Except for paint, the exterior is in excellent condition, considering its age. The height of the grading of the county road in the background gives you some idea of how water will stand around the school.

### #3

North side of building, taken from the east-west road. I believe the right half is the original part built in 1901.

### #4

This is the entry that was added in 1925.(note coat hooks on wall)Oneof the original??? desks.There are more of these in the basement, some have been in water(as above).

#### #5

View from NW looking to SE.I think the metal hood that shows up on both east and west sides of the basement was for venting the basement to dry it out,or air for the furnace.

## #6

Interior view showing the folding doors used to divide the classrooms. The shelving with the doors is part of a series of bookcases .The white stuff on the floor is plaster that has fallen from the ceiling.

## #7

View from the other room, again showing bookcase and door over shelves which probably held paper, paste, and other teaching materials. #8

View from east half of interior with teachers desk.Note blackboards, probably installed when school was expanded in 1925.Also note shades over windows.Windows show little signs of rot, and most glass is intact. #9

View from front of room.looking toward entry-way/The windows on the floor were used as storm windows, and were taken off when the plywood was put on.

## #10

"Klien and Lee" building, second building north of the Carroll House. Built in the early 1900's.Originally housed a "general store", later a hardware store, grocery store, restaurant etc., on lower level, with living areas on the second level.Door in center opens to stairway going to upper level.
