Feature Preservation Recommendation(s) (Check all that apply):

- Individual nomination
- Contributes to a potential district
- No nomination potential
- Will not contribute to a district
- Potential district—feature would be a contributing element if other properties constitute a district
- Thematic nomination potential
- Component of a historic site or landscape
- Moved (specify all applicable choices)—a) relocation occurred within a historic period; b) recreates original site, orientation, landscape, & spatial relationships; c) compatible in context with neighboring structures; d) relocation has damaged eligibility
- Historical associations require further investigation

SITS# 32

ED

1. Feature Description, Integrity, Eligibility:

Eddy Township school, know as Riverside School, might have been built in the mid 1880's or later. The school district was originally Washington Lake (#9) and in 1907 the district was divided in two and Eddy School District #7 was formed.

This main body of the school, last painted red, measures 28½ feet east to west and 20 feet north to south. The entry on the west end of the school measures 8 feet 3 inches deep by 20 feet wide. This one room prairie school sits on a crumbling concrete foundation. The school has three double hung windows on the south side and three on the north. The glass is mostly intact. The windows on the north side are covered with plywood. There are also two windows in the entry with a door facing to the south. The door is also boarded up. Wood lap siding covers the walls. The building was last used by the Sheyenne Valley Rod and Gun Club.

The roof has asphalt shingles on the main body of the school and wood shakes on the entry. It looks like the entry might have been added at a later time. Simple 4 inch lumber was used for the corner trim. Much of the chimney has fallen off the building.

There is an electric meter on the north side of the school building. Fluorescent lights hang from the ceiling. Through the windows can be seen the chimney enclosure at the east end of the building, there is a fuel oil barrel on the ground outside the school indicating that might have been source of heat. There is sheet rock on the ceiling and walls. Blackboards can be seen either side of the chimney on the east wall as well as between windows on the north and south walls. The entry has coat hooks visible along with an electric box.

The school is located in a hilly area, mostly pasture around it. It is just north of the Warwick Dam on the Sheyenne River. There are trees on three sides of the school.

The school, also known as Riverside, reorganized with Warwick in 1958.

EARTH FACTS

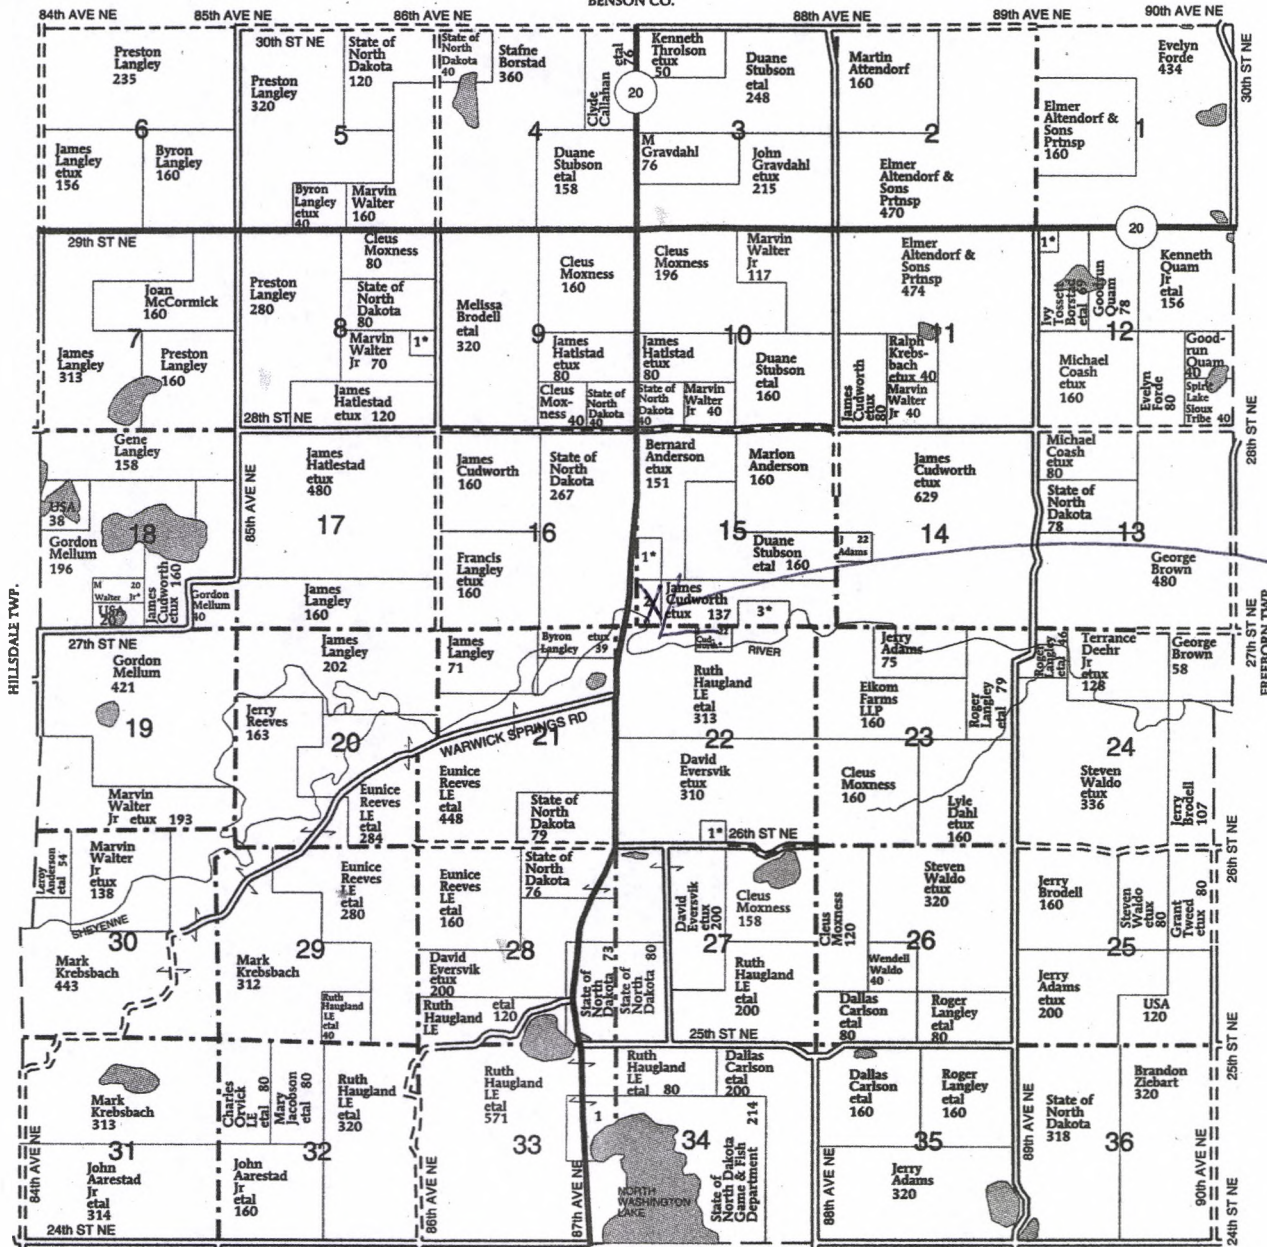

FACT Earth is gradually slowing down. Every few years, an extra second is added to make up for lost time. Millions of years ago a day on Earth would have been 20 hours long. It is believed that, in millions of years time, a day on earth will be 27 hours long.
