PAGE 3 – Feature Data

Field Code Hamar SchoolSITS# 32 ED 419

Complete one Page 3 for each architectural feature at the site.

1. Feature Description, Integrity, Eligibility:

This feature is a 2 room school located in a very small town. It is on a poured concrete foundation that raises the building up about 3 feet. The concrete foundation has covered openings to either side of the entry which may give access to the crawl space. The hip roof is covered with metal sheeting with metal capping on all seams. There are two shed additions on the south side that have failing asphalt shingles and some metal sheeting on the east addition. There is a tall, red brick chimney located near the edge of the roof on the south slope near the east end of the school. The soffits are closed. The school measures 53 feet east to west and 26 feet north to south. The east addition measures 16 feet by 16 feet with the bathroom addition measuring 16 feet north to south by 6 feet east to west.

The siding begins with a rake board under the eaves on all side of the school. The remainder of the siding on the school is 6 inch wood lap with 6 inch corner trim. A water board runs around the entire school. The two additions on the south side also have 6 inch wood lap siding with 6 inch corner trim. On the north side there is a bump out for the entry. A gable roofed portico leads to the school entry with walls on the east and west sides of concrete steps and platform. The bottom foot under the roof peak of the entry has a bit of decorative roofing which slants to the north. The same slanted foot adds decoration under the higher gable roof of the entry. A half moon window is located under the peak of the entry. Two additions are seen on the south side of the school. The east most addition has a door that faces east. There may have been a window on this wall as well. Inside concrete steps lead into the school at the southeast corner. This addition has a furnace and well located inside. The other addition is bathrooms. Two small windows face south from this addition. There is a small double hung window to either side of the portico. Stepping inside the entry door you can go either right or left to go into one or another of the school rooms. Just inside both school rooms are rows of coat hooks. All the doors are 5 panel wood doors with large transom windows. This school served all grades when it was in use. There are several, large double hung windows with intact glass. Two windows are located either side of the entry with two pair of similar windows on the west and east walls. One more window is located on the south side between the two additions. Some of the windows are covered. The floor is hardwood. The walls and ceiling are wallboard with wainscot on the lower 1/3 of the walls. Blackboards are located on either side of the center wall. More blackboards run along the south walls in both school rooms. A door near the entry wall gives access to the other school room. Light fixtures and outside wiring speaks of electricity.
