1. Feature Description, Integrity, Eligibility:

The feature is a one room prairie school on a poured concrete foundation. The gable roof is covered with corrugated metal sheeting with metal capping and finials. There is a stub of a red brick chimney around a concrete insert. The soffits are closed. The building measures 16 feet east to west and 24 feet north to south.

A rake board begins the siding under the eaves at the peak ends of the school. The remainder of the siding is 6 inch wood lap with 4 inch wood corner trim. 5 multipane double hung windows run along the east wall, some with glass and some covered. There is a small window opening on the west side of the entry for a fuel door. A square hole high on the north wall was likely cut to put grain inside the school. Anchor boards and heavy wire anchors run from north to south inside the school. The interior walls and ceiling are all finished with beadboard. Dark areas on the west and south walls show where blackboards were located. The entry door is gone and a two panel wood door gives access into the school room from the entry. The floor is tongue and groove hard wood. Electricity was present at some point.
