Complete one Page 3 for *each* architectural feature at the site.

1. Feature Description, Integrity, Eligibility:

The feature is a one room prairie school on a poured concrete foundation. It was moved to this location for use as a shop. The hip roof has few a shakes remaining. The soffits are open today because of deterioration of the school. There is a metal pipe chimney near the south side of the east slope. The building measures 28 feet north to south and 16 feet east to west.

The siding begins with a rake board on all sides of the school. The rest of the siding is 6 inch wood lap with metal corner trim. The original window openings were filled in with vertical metal sheeting. Four small 4 pane windows were installed in the metal sheeting on the north side. There is an plywood entry door on the east side. A large overhead door was installed on the north side. Remnants of plaster can be seen on the walls and ceiling of the school. A lot of daylight is coming through the roof. The interior is used for storage today and it is a mess. There is electricity.

NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature DataField Code EL1-009-ARCHSITS# 32 EM 1134**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

F.9 is a hipped roofed garage featuring a steeply pitched roof, wide eaves, and wooden shake roof cladding. The roof is in poor condition, with large sections of the shake missing and sections of the roof beginning to bow. Portions on the eaves are missing as well. The building is clad in wooden clapboard siding with metal bracing at the corners. The building rests on a concrete slab foundation.

The front (northern) façade contains a centrally-placed, single-car garage door. A large amount of farm equipment and materials are currently resting in front of the door, and it is impossible to tell if the door is completely intact. The western elevation contains four evenly spaced four-lite wooden windows set in simple wooden frames. The wall surface surrounding the windows has been replaced with vertical wooden siding. A large ventilation pipe projects off of the wall surface to the north of the windows. There is no fenestration present on the southern elevation. On the eastern elevation, a single entranceway, covered by a plywood door, is the only opening present.

An exact construction date for the garage is unknown, although the structure is present on aerial imagery from the late 1950s or early 1960s (NDGISHUB 2018). The structure has been given a tentative construction date from the 1920s to 1930 based on its design, construction materials, and size.

The garage is considered to be in fair condition, due to deterioration and weathering visible across the structure. Changes have been made to the structure, including replacement of the building's doorway and replacement of portions of the siding. The individual integrity of the garage's materials and style are impacted due to these changes.

Further, the garage's design is commonplace and has little architectural significance. It has no known association with any people or events of significance and is considered unlikely to possess the ability to yield further data. The feature is recommended individually as not eligible for the NRHP.

3. Access (to rural areas):

From Linton, ND, head east on Highway 13 for 12.2 miles (mi) and turn left onto 21st Ave SE. Proceed north on 21st Ave SE 12.6 mi and turn right onto 68th St. SE. Proceed east on 68th St. SE 1.9 mi and the site is on the right side of the road.

4. Site Area (ft²): 312,7365. Description of **SETTING**:

The site is set in the gently rolling prairie of the Missouri Coteau Slope. The region is rural, with scattered farmsteads and rolling pasture lands and steep drainages. While many farmsteads have been abandoned, just as many remain active. Corn, sunflower, and soybeans are the predominant agriculture products of the area. Livestock is pastured on the steeper slopes surrounding drainages. Small churches and abandoned one-room school houses dot the countryside.

The closest towns, Napoleon and Kintyre, are 9.7 mi and 8.4 mi away, to the northeast and north, respectively. The county seat, Linton, is 17.8 mi to the southwest. The site sits 1.1 mi from the Emmons County border with Logan County.

The site is surrounded by agricultural land to the north, east, south, and west, and pasture to the northwest and southwest. Thick stands of trees bound the side to the west, north and east.

**NDCRS ARCHITECTURAL SITE FORM
PAGE 5—SITE DESCRIPTION**Field Code EL1-009-ARCHSITS# 32 EM 1134**6. Summary of ALL Site Features & Evaluation of Significance:**

The site is composed of 11 features:

- F.1 - Dwelling
- F.2 - Barn
- F.3 - Outhouse
- F.4 - Shed
- F.5 - Animal Shelter
- F.6 - House
- F.7 - Grain Bin
- F.8 - Grain Bin
- F.9 - Garage
- F.10 - Three Windmills
- F.11 - Shed

This site is a farmstead in rural Emmons County, ND. While several of the buildings are considered to be in good to excellent condition, most retain poor integrity due to changes and additions made to the structures. Taken as a whole, the site's integrity has been compromised. Research into the site reveals the land was originally part of a 160 acre parcel platted to Henry Miller in 1911 under the Homestead Act of 1862 (BLM 1911). Miller, an American farmer from Minnesota, is listed as a resident of Emmons County until the 1930s (US Census 1930). Few further records could be located until 1962, when the property was listed under the ownership of Arne and Martha Laine (Midland Atlas Co. 1962.) The Laine family has retained the land until present day (Midland Atlas Co. 1974, 1993, 2016).

Aerial imagery reveals the layout of the farmstead has also undergone alterations. The driveway and southern portion of the farmstead have been rearranged to expand the site to include the modern house currently being constructed on site. In order to include the dwelling, two established tree rows were removed, and the driveway was expanded into the agricultural field to the south, before looping back through the site's garden to connect to the original driveway again.

Continuation Page 1

Continued from Summary of ALL Features & Evaluation of Significance:

Of the 11 features on site, only five remain which predate the 1950s. Further, none of the site's features, including the five original structures, have the significance to be individually eligible for the NRHP. Taken as a whole, the site's integrity has been compromised and the changes visible across the property have severely hampered the site's ability to convey its original early period of significance.

All features on site are considered commonplace and architecturally plain. Further, research was unable to document an association with a significant person or event. Finally, the potential for the site and features to yield important information to the history of the area is considered very low. As such, the farmstead is recommended not eligible for the NRHP under Criteria A, B, C, and D.
