NDCRS ARCHITECTURAL SITE FORM**PAGE 3—Feature Data**Field Code SITS# 32 **Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a large, one room school on a poured concrete basement. The building is two stories tall, the roof was raised to accomodate the second story. The hip roof of the main building, the west addition and roofs of both entries are covered with asphalt shingles. Both the north and south slopes of the roof have large dormers and the east slope has a smaller dormer. A red brick chimney is located at the top of the east dormer. The soffits are open. There are eaves troughs on all sides of the school.

The siding on this building is 12 inch masonite. There are several windows, all newer double hung windows with storm windows. Two windows are at either end of the upper north and south dormers, one small window in the south dormer, three separate windows on the north wall of the lower floor, two sets of two windows on the south wall, either side of the entry and one window on the east wall to the right of that entry. Both entries have storm doors over 3 panel wood, with upper window, doors. There are concrete steps leading up to both of the entries. Electricity is present. I did not learn anything about the interior of this building.
