Feature Preservation Recommendation(s) (Check all that apply):

- Individual nomination
- Contributes to a potential district
- No nomination potential
- Will not contribute to a district
- Potential district—feature would be a contributing element if other properties constitute a district
- Thematic nomination potential
- Component of a historic site or landscape
- Moved (specify all applicable choices)—a) relocation occurred within a historic period; b) recreates original site, orientation, landscape, & spatial relationships; c) compatible in context with neighboring structures; d) relocation has damaged eligibility
- Historical associations require further investigation

NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature DataField Code Pilot Mound Township SchoolSITS# 32 GG**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a simple woodframed one room prairie school on a foundation of concrete. The roof has wood shakes over wood sheathing. Many of the shakes are missing. There is very little left of the chimney, originally located at the east end of the roof peak. There is a round metal cover over what was most likely a door for access for grain storage. The peak shows remnants of the metal capping with finials at either end. Metal capping and a finial is also present on the entry. The eaves have closed soffits. The building measures 18 1/2 feet north to south and 32 1/2 feet east to west.

There is a wide header under the eaves at both ends of the peak of the roof. Another on the entry. The siding is 6 inch wood lap with 4 inch corner trim. On the north side there are three window openings with some of the framing still present. The south side also has two window openings, again some framing remains but no glass. All are boarded up from the inside. In the middle of the south wall is a door, perhaps added at a later time to have access to grain storage. The building has 2 by 4's on the outside with large bolts attached to lines running across the interior to stabilize the building when it was full of grain. The entry has a door opening, the door is gone. There is concrete pad for entry. The entry is mostly stripped out with a 5 panel wood door giving entry into the main body of the school. There is one covered window to the west and another small window hole further to the north on the west end. The roof of this part of the building is gable until it becomes shed as it covers an small addition to the north. The flooring in the school is tongue and groove hardwood. The walls have wall board on them and there is not ceiling left. It was taken out to allow for grain storage. The blackboard remains on the east wall. No evidence of electricity.
