NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature DataField Code Leipzig SchoolSITS# 32 GT**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

This is an example of a well kept one-room prairie school. The building has metal roofing with newer, concrete block chimney at the north end of the school. There is also a vent near the peak of the roof on the south side. The building is being used for 4-H meetings as well as township meetings. The school is large at 32 feet three inches north to south with the shed adding another 12 feet. The width of the school is 24 feet with the shed measuring 14 feet east to west. The building has 6 inch lap siding with 4 inch trim boards at the corners. There is an 8 inch trim board under the roof line. The east side has one small fixed pane window in the entry and 7 double hung windows in the main body of the school. Also on the east side is a door giving access into the rear addition. There is a wood porch/step with a ramp for access to the school. The door to the school itself is a hollow core, more modern door. Electricity is present with wires leading to the school and the meter on the east side.

The walls and ceiling in the entry and school are all beadboard planking. There are ceiling lights inside, in the main part of the school the lights are on long chains and I suspect they once had globes. As you enter the main body of the school there is space around to the left where coat hooks are along the west wall of the entry and the south wall of the large room. The floor is tongue and groove. There is a furnace at the north end of the large room and the furnace is propane today. There are blackboards along the north wall, either side of the furnace. In the addition there is an old oil burning stove and I am thinking that was the fuel of choice years ago. The addition at the rear of the school is bare board studs and siding, no effort was made to insulate this area. Some of the old school desks remain in the school.
