NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature Data

Field Code Foster SchoolSITS# 32 LO**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a one room prairie school house sitting on a poured concrete foundation. The building was moved to its current location for use as a shop and storage. The hip roof is covered with asphalt shingles. There is no chimney. The west slope of the school had a dormer with a boarded up window opening facing west. The soffits are closed with beadboard. The school measures 20 feet north to south and 32 1/2 feet east to west.

A wide trim board runs around all four sides of the school just under the soffits with the remainder of the siding being 6 inch wood lap with metal corner trim. There are two double hung windows on the west end either side of the 5 panel wood entry door. The windows look to have newer storm windows over them. There is no access to this door as tires and other items are stacked in this area. On the south side there is one double hung, multi pane window, half covered, with the others being removed to accommodate a double wide overhead garage door. The interior is full of vehicles, tires and more. The east wall shows where a blackboard hung. The ceilings are high with a plate rail running all side about 2 feet from the ceiling. The ceiling and walls are lathe and plaster. The floor is concrete. There was electricity at one time as evidenced by wiring on the outside of the building. The west end of the building has two coat rooms to either side of an entry hall.
