NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature Data

Field Code Snow Township School #1SITS# 32 ML**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a large, wood framed prairie school sitting on railroad ties. The school was moved 1/2 mile south of its original location in Section 18. This school building is located in a storage area for boats, snowmobiles, campers and other equipment.

The roof has asphalt shingles on both the main roof and the dormer window, some of the shingles are loose or missing. That window in the dormer is boarded up. There are metal caps on all the seams on the roof. The 6 inch lap siding shows about half the paint remaining. The school measures 32 feet north to south and 20 feet east to west. The entry measures 5 1/2 feet north to south and 6 feet east and west. All corners are trimmed with 6 inch pine boards. Where the soffit meets the outside wall of the school there is quarter round above an 8 inch trim board.

The entry door is wood, perhaps not original to the school. As you step into the entry there is a boarded up window to the left (south) and the door is to the right. The entry has green painted wainscoting. This building is being used for storage so wood/tires and etc. can be seen inside. The floor is hardwood with more wainscoting on the walls in the school room. This wainscoting is painted white and was perhaps installed at a later date as there are electric outlets along that part of the wall. There is a furnace located on the west wall. It is plumbed into the chimney but there is not a chimney on the roof so doubt it has been used very recently. The school has two windows on the south all, either side of the entry and then there are 6 windows on the east side, some of the glass is missing but not are boarded up. According to a student who attended this school it used to sit on a basement and the furnace was located downstairs. There is a door near the southeast corner of the school that leads into a small closet and this used to be where they went downstairs. On the school side of this small room are coat hooks. The trim around some of the windows was pretty ornate and all painted white. One of the inside corners has a cornice trim piece about half way up the wall.

There are blackboards on the northern 2/3 of the west and across the entire north wall. Above the blackboards the walls are covered with wall board. They also installed this same wall board on the ceiling. There had insulation about the ceiling boards as some of the boards and insulation are falling in. The school had electricity evidenced by outlets and 4 hanging fixtures minus the white globes. This school closed about 1959.
