## NDCRS SITE FORM CONTINUATION PAGE

Field Code \_\_\_\_\_ SITS# 32 MN 381

Complete a *Continuation Page(s)* for information that does not fit in the space available on other sections of a Site Form.

Historic research was conducted for the site location that included Bureau of Land Management (BLM) General Land Office (GLO) land patents, BLM GLO survey maps, and United States census documents. According to land patent documents, the property located in the NE¼ of Section 29, T151N, R90W, was originally patented by Eric Anderson on April 26, 1919, although there was no other documentation to support Mr. Hansen resided on the property (BLM 1919). The only available BLM GLO survey map for T151N, R90W was completed in 1910, and did not indicate that anyone had been residing on the property (Farmer and Veigel 1910). The 1917-1918 World War I Selective Service System Draft Registration Cards indicate a Swedish-born Eric Anderson was registered on June 5, 1917 at the age of 30 (U.S. Selective Service System 1918). The registration lists Anderson's address as Parshall, N.D. and that he was employed as a farmer in Township 151 North, Range 90 West, Section 24. No Eric Anderson appeared in any of the U.S. Census records for Mountrail County, but there are many Eric Andersons, several with alternate spellings of both the first and/or last name, who live in nearby counties. No other documentation was found pertaining to Eric Anderson in Mountrail County nor was there any documentation connecting Anderson to local or state historical significance.

Through contacting the previous landowner, Joe Waldock, it was discovered that the structure (F1) was an old schoolhouse, the original construction date of which is unknown. The landowner, who has farmed the property for many years, stated that the structure had not been used in years and was falling victim to vandalism (a hole punched in the roof among other damage) and rodent damage. The landowner also stated that the structure was actually two schoolhouses put together end to end, with the second building imported from another unknown location. The landowner did not know when the second building was brought to the site (Lechert, Personal Communication a, August 10, 2010). The Superintendent of the Parshall School District No. 3, Stephen Cascaden, was contacted to determine if an age could be applied to the structure as the building is thought to be originally associated with this district.

Unfortunately, no date is available from the school district, but the superintendent guessed the building was likely older than 50 years old (Lechert, Personal Communication b, August 10, 2010).

The knowledge of a second schoolhouse being imported from another location for the purposes of adding on to the existing structure as well as the continued vandalism of the building further reduces the integrity of location and setting of the site and negatively impacts the building's integrity of design. SWCA reaffirms the recommendation that 32MN831 is not eligible for nomination to the National Register of Historic Places (NRHP) under Criteria A and B, as the site was not found to be linked to historically significant events or people. The site is recommended not eligible under Criterion C, as the architectural resource has undergone several modifications outside of the building's period of significance, negatively impacting the integrity of materials of the building. The site is recommended not eligible under Criterion D, as the extensive ground-disturbing activities, including pipeline construction and tilling coupled with heavy vandalism and looting, has severely impacted the potential for the site to yield further information to the history of the region.

NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature Data

Field Code S-SL-1-FertileLCS SITS# 32 MN

1. Feature Description, Integrity, Eligibility:

Feature 1 is a rectilinear building that appears to have had a large addition built on the southern half; this comprises nearly half of the current building's total length. The foundation for the southern half of the building is composed of poured concrete, while the northern half's foundation is a combination of steel I beams and wood beams.

The south facade has one door opening with a partial original door. A set of poured concrete stairs leads up to the doorway which appears to have been installed at a date later than the construction of the building. A single square window opening is located in the top center portion of the south facade, with the glass pane broken. The exterior cladding of the south facade is horizontal milled lumber painted white with green painted wood shakes applied to the gable end.

The west elevation has what appear to be six window openings; however, all of the openings have been boarded up and covered in the same exterior cladding as the south elevation. The window openings all appear to be square dimensions that do not support the typical double hung window style indicative of early Victorian era architecture for the region, indicating that the window openings were potentially modified from their original design.

The north elevation has no window or door openings. The exterior cladding is the same as the south facade and west elevation, and the gable end is consistent with the south facade's gable end cladding. The west elevation of the building is clad in a white asbestos siding applied at a date considerably later than the period of significance for the building. There are two window openings on the west elevation of the building that are approximately 1.5 by 3.0 feet in dimension, typical of Victorian era architecture.

The roof of the building is of a moderately sloping front gable design and is clad in recently applied three-tab asphalt shingles. A square brick chimney is located on the northern end of the roof ridge and appears to have been added to the building at a later date as evidenced by the relatively good condition of the chimney in comparison with the rest of the building. The building has pronounced eaves with exposed rafters and the rake is also very pronounced.

The building appears to have two separate portions: the original portion, which appears to be the northern half of the building including the chimney, as evidenced by the exposed wood and I-beam foundation; and the addition, which appears to be the southern half of the building with the newer poured concrete foundation. A distinct dividing line between the two portions of the building is evident along the roof and west and east elevations. The site has been subject to vandalism and exhibited several bullet holes.

Historic research of the site using BLM General Land Office land patent records did not reveal data as to the original owners of the site, nor did research indicate that the site was part of any major historic events for the region.

Feature 2 is a trash concentration consisting of historic and modern trash. The feature measures 15 by 25 feet with a height of 3 feet. The feature is well-defined and only lightly sodded. Feature 2 is composed mostly of field stone and non-historic trash, with approximately eight historic solder-dot cans and one fragment of non-diagnostic whiteware.

### NDCRS ARCHITECTURAL SITE FORM PAGE 4—SITE DESCRIPTION

Field Code S-SL-1-FertileLCS

SITS# 32 MN

Complete one Page 4 for the entire site.

2. Owner's Contact Information:

N/A

3. Access (to rural areas):

From the town of Parshall, travel south on North Dakota Highway 37 approximately 7 miles, then turn west on 31st Avenue. Travel 4 miles on 31st Street, then turn north on 76th Avenue and travel approximately 0.5 miles to the site location.

4. Site Area (ft<sup>2</sup>): 32,777

5. Site Description:

S-SL-1-Fertile LCS consists of one standing historic building and an historic trash deposit located on a flat upland plain. The site is bordered to the east by 76th Avenue, which runs north/south. A barbed wire fence trending east/west is approximately 100 feet south of the site, while a recently constructed north/south-trending pipeline enters the southeast corner of the project area and trends directly west before returning to a northern bearing, essentially avoiding the site. A west-trending draw is approximately 0.15 mile southwest of the site and a north/south-trending belt of deciduous trees is approximately 0.10 mile west of the site. The viewshed at the site is excellent, with an open aspect to the southwest. The vegetation on site was sparse due to recent heavy tillage from wheat farming and the recent construction of the pipeline; vegetation consisted of winter wheat and little bluestem, allowing for an average 90 percent bare ground surface visibility at the time of survey. The sediments on site are composed of a brown sandy clay loam formed through primarily aeolian processes. The soils at the time of survey appear to have been subject to heavy turbation as a result of pipeline construction and plowing related to farming practices. Other impacts to the site include vandalism and looting.

**NDCRS ARCHITECTURAL SITE FORM  
PAGE 5—SITE DESCRIPTION**Field Code S-SL-1-FertileLCS SITS# **32 MN** \_\_\_\_\_**6. Summary of All Site Features & Evaluation of Site Significance:**

The site consists of one standing building (Feature 1) and one historic trash deposit with modern trash included within (Feature 2).

S-SL-1-Fertile LCS is an historic architectural site consisting of a standing building and a trash deposit. SWCA recommends the site as not eligible for nomination to the National Register of Historic Places (NRHP) under Criteria A and B, as the site was not found to be linked to historically significant events or people. The site is recommended as not eligible under Criterion C, as the architectural resource has undergone several modifications outside of the building's period of significance. The site is recommended as not eligible under Criterion D, as the extensive ground-disturbing activities, including pipeline construction and tilling coupled with heavy vandalism and looting, has severely impacted the potential for the site to yield further information to the history of the region.

No further work is recommended at S-SL-1-Fertile LCS, as the site is recommended not eligible for nomination to the NRHP.

From the town of Parshall, travel south on North Dakota Highway 37 approximately 7 miles, then turn west on 31st Avenue. Travel 4 miles on 31st Street, then turn north on 76th Avenue and travel approximately 0.5 miles to the site location. Site is located west of 76th Avenue.

2. Site Description (include features):

S-SL-1-Fertile LCS consists of one standing historic building and an historic trash deposit located on a flat upland plain. Feature 1 is a rectilinear building that appears to have had a large addition built on the southern half; this comprises nearly half of the current building's total length. The foundation for the southern half of the building is composed of poured concrete, while the northern half's foundation is a combination of steel I beams and wood beams. The exterior cladding of the building is a combination of horizontal horizontal milled board and asbestos. Feature 1 has a moderately sloping front gabled roof with recently applied 3-tab asphalt shingles and a small chimney on the northern end of the roof ridge. All of the windows have been replaced or broken on Feature 1.

Feature 2 is a trash concentration consisting of historic and modern trash. The feature measures 15 by 25 feet with a height of 3 feet. The feature is well-defined and only lightly sodded. Feature 2 is composed mostly of field stone and non-historic trash, with approximately eight historic solder-dot cans and one fragment of non-diagnostic whiteware.

3. Description of Cultural Material (quantify & identify artifacts, not features):

A total of eight crushed solder dot cans and one fragment of white ware were observed in association with Feature 2.

## PAGE 3—Descriptive Section

Field Code S-SL-1-FertileLCS

SITS# 32

5. Description of Subsurface Testing:

No subsurface testing was conducted at the site as the entire surface of the survey area exhibited evidence of extensive plowing, pipeline construction, and other forms of ground disturbing activities. Feature 2 appeared to be only a surface manifestation, as evidenced by the lack of soil mounding typically associated with depressional features.

6. Field Conditions:

Wet  Dry  Windy  Rainy   
Snowy  Overcast  Sunny  Twilight

7. Technique(s) Used to Estimate Site Area:

Transit  Tape Measure  Paced  Visual Estimate   
GPS  Other (Explain) \_\_\_\_\_

8. Rationale for Site Boundary Determination:

Surface Cultural Materials  Features  Topography   
Continuous Stratigraphic Exposure  Systematic Subsurface Probing   
Subsurface Testing  Other (Explain) \_\_\_\_\_

9. Current Use of Site: Vacant.

10. Landowner Contact Information: \_\_\_\_\_

11. Vegetation: Sparse mixture of native and invasive grasses.

12. Vegetation Cover (% of visible ground): 85

13. Snow Cover (% of ground obscured by snow/ice): 0

14. Person-Hours Spent at Site: 2

15. Project Title & Principal Investigator:

Cultural Resource inventory of the Pecan Liberty CDP and Fertile LCS Proposed Compressor Stations, Mountrail County, ND; Scott A. Slessman and Judith R. Cooper.

## 16. Report Title &amp; Author(s):

Klitzka, Nelson and Stephanie Lechert

A Class I and Class III Cultural Resource Inventory of the Pecan Liberty CDP and Fertile LCS, Mountrail County, North Dakota

## 17. Description of Collection(s) Observed &amp; Contact Information:

No collections observed.

## 18. Statement of Integrity:

The site exhibits poor integrity of setting and feel, and has been heavily impacted by plowing, pipeline construction, looting, and vandalism. Feature 1, the standing building has undergone several changes outside of its period of significance, while the trash concentration consisting of several crushed cans and one fragment of whiteware, was likely observed out of original context given the heavy amount of disturbance in the area.

## 19. Statement of Significance:

S-SL-1-Fertile LCS is an historic architectural site consisting of a standing building and a trash concentration. SWCA recommends the site as not eligible for nomination to the National Register of Historic Places (NRHP) under Criteria A and B, as the site was not found to be linked to historically significant events or people. The site is recommended as not eligible under Criterion C, as the architectural resource has undergone several modifications outside of the building's period of significance. The site is recommended as not eligible under Criterion D, as the extensive ground-disturbing activities, including pipeline construction and tilling coupled with heavy vandalism and looting, has severely impacted the potential for the site to yield further information to the history of the region.
