**NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature Data**Field Code Sidonia School #1SITS# 32 MN**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a one room prairie school on a rock and concrete foundation. The gable roof of the main body and entry are covered with wood shakes with metal capping. There is a stub of a chimney at the north end of the peak.

There is a wide trim board on the exterior wall under the soffits on the peak ends of the school and entry. The siding is 6 inch wood lap with 6 inch corner trim. Some of the siding is beginning to fall away from the planking. Three concrete steps lead to the concrete stoop. The entry door is a broken 5 panel wood door. The following information was gathered by visiting with former students and the current owner: The interior walls and ceiling are lathe and plaster. The double hung windows were covered on the outside to protect the glass and later covered on the inside to allow for grain storage. There are three window openings on both the east and west sides of the school. Not sure if the blackboard, originally located on the north wall, is still there. There is a small, multipane window opening to the left of the entry door and the glass is gone. The flooring is tongue and groove hardwood. They had electricity the last years the school was operational.
