1. Feature Description, Integrity, Eligibility:

The feature is a one room prairie school on a foundation of concrete block. The gable roof is covered with wood shakes with metal capping and finials. There are cornice returns at both ends of the school. There is a chimney at the north end of the peak that appears to be freshly painted tin. The building measures about 18 feet north to south by 26 feet east to west. The soffits are closed.

There is a rake board that begins the siding under the eaves on all sides of the school. The remaining siding is 6 inch wood lap with 6 inch vertical wood corner trim. The door opening is on the east side with no door. There are pieces of board at the bottom half of the opening to keep people out. A transom opening is above the door. A small vestibule is just inside the door. There are double hung window openings on the east side to either side of the door. There are 6 double hung window openings on the south wall of the school with some framing and no glass. There are two openings on the north wall that may have been used to clean grain out. The floor is tongue and groove hardwood. The walls are lathe and plaster. The ceiling is all torn out and open to the roof boards. No blackboards or wainscot are left in the school.
