Complete one Page 3 for *each* architectural feature at the site.

1. Feature Description, Integrity, Eligibility:

The feature is a one room prairie school on a poured concrete basement. There are several windows in the basement, most have glass. The roof is finished with wood shakes with metal capping and finials. A red brick chimney sits on the north slope of the roof closer to the east end. Two metal pipes either side of the roof peak at the east end might lead the conclusion that there were bathrooms inside the school. The soffits are closed.

The siding is 6 inch wood lap with metal corner caps. There is a lot of paint on this school. An entry on the east end of the school has a shed roof is it covered with wood shakes. There is a steel door. Four concrete steps lead to the concrete platform the entry sits on. There are double hung windows to either side of the entry. On the south wall, nearest the east end there is a fixed pane glass window. On the same wall are two sets of three double hung windows with about half the glass remaining. The west addition has three concrete steps leading to another solid core door. The roof of the shed is covered with wood shakes. There are two windows on the west wall of the she addition. Mention was made in a previous recording that concrete was poured at different times leading to thought about the additions being added at a later date. No entry was made.
