1. Feature Description, Integrity, Eligibility:

The feature is a one room prairie school with no visible foundation. The gable roof is covered with asphalt shingles and there are cornice returns on both the north and south sides at the eaves. There is no chimney. The soffits are closed. This building was moved from its original location.

Rake boards begin the siding on all four sides of the school. The siding continues with 6 inch wood lap with 4 inch wood corner trim without a speck of paint. There is a door made of vertical wood boards on the south side. Entry was not made. The west wall has a bank of 4 windows with three of the four covered with plywood. The uncovered window is double hung with glass intact.

4. Description of Access and Site Setting:

This buildings are located in a farm yard with the small school west and the larger one east. There is a modern storage building just to the east. There are other buildings at this location as well. Beyond the schools are oil pads and open farm land. Directions to this location are from Hwy 23. Go north on 116th Ave NW about 2 miles, taking the left fork at the Y in the road. Go up over the hill and the farm will be down below on the right.

1. Feature Description, Integrity, Eligibility:

This feature is a large one room prairie school on a wood foundation. It was likely moved from its original location. The hip roof is covered with wood shakes with metal capping at the peak as well as all four ribs. Some of the wood shakes have blown away. The soffits are closed. There is no chimney.

A rake board begins the siding under the eaves on all four sides of the school. The remaining siding is 4 inch wood lap with 6 inch vertical wood corner trim. There is a door opening on the south wall of the school with window openings to either side. The right window is covered while the left has a bit of framing, no glass and is uncovered. There is a boarded up opening above the door that was likely a transom window. This opens into an entry/coatroom. There are 6 window openings on the west wall of the building with no framing or glass. Looking in through these missing windows it looks like the walls and ceiling are failing lathe and plaster and the floor is hardwood. There is an antenna on the west wall with a cord to somewhere! There was electricity at some point.

**NDCRS ARCHITECTURAL SITE FORM
PAGE 5—SITE DESCRIPTION****UPDATE**

Field Code _____

SITS# 32 MZX1470**6. Summary of ALL Site Features & Evaluation of Significance:**

Metcalf recorded site lead 32MZx1470 in October 2014. Metcalf submits this update to reflect that following additional research, including a deeds search completed on April 24, 2017, this site lead is found to lack significance under the NRHP Criteria. Under Criterion A, it is found to lack association with events that have made significant contribution to the broad patterns of our history. The deeds search found no association with historically significant persons under Criterion B. The site lead does not represent significant characteristics of a type, period, or method of construction under Criterion C, and is unlikely to yield important information in reference to research questions under Criterion D.

Metcalf recommends this site lead not eligible for inclusion in the NRHP.

NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature DataField Code MAC-NKL-56xSITS# 32 MZ**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

DESCRIPTION: Feature 1 is a small one-room schoolhouse, likely moved from its original location. The structure has a front-gabled roof with eave returns and interlocking brown asphalt shingles. It is clad in horizontal wood clapboard siding, which was originally painted white. Wooden fascia boards are found beneath the roof on the east, south, and west facades. The structure also has wood cornering, though it is missing in places. It appears that a bank of windows was once located in the center of the west facade, but it has been boarded up with plywood. The primary entrance, a door with vertical wooden boards and metal hinges, is located in the center of the south facade. No fenestration is present on the east or north facades.

INTEGRITY: Feature 1 is in fair condition, and retains integrity of design, and workmanship. Integrity of materials is reduced by the structure's state of deterioration and the boarding up of windows on the west facade. Integrity of location and setting have been lost due to the fact that the structure was likely moved from its original location. Integrity of feeling has been impacted by the transformation of this area into a man camp.

ELIGIBILITY: Feature 1 has not been evaluated for eligibility to the National Register of Historic Places. Current survey data are not sufficient to determine significance. Until a deed search can be performed, avoidance is recommended.

NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature DataField Code MAC-NKL-56xSITS# 32 MZ**1. Feature Description, Integrity, Eligibility:**

DESCRIPTION: Feature 2 is a one-room schoolhouse. It currently sits on a wood sill, and was likely moved from its original location. The structure has a hipped roof with wood shingles, many of which are missing. Metal ridgepoles run along the edges of the roof, and part of the cornice on the west facade is missing. The schoolhouse has horizontal wood clapboard siding which was originally painted white, wood cornering, and wood fascia boards. A bank of six windows with wood frames is on the west facade, but most glass and muntins are now missing. It appears that they were six-over-six, double-hung windows. There are two rectangular openings on the bottom of the west facade. Paint on this facade is considerably more faded than it is on the others. No fenestration is present on the east and south facades. The primary entrance is located on the north facade. The door was either ajar or missing at the time of survey, with lumber protruding from the entrance, indicating that the structure is currently used for storage. A transom light was located above this entrance, but it has been boarded up with plywood. Double-hung windows are located on either side of the door. The easternmost window is missing all glass and muntins, while the westernmost window has been boarded up. A modern storage structure abuts the structure on the east side.

INTEGRITY: Feature 2 is in fair condition. Integrity of materials, workmanship, and design have been impacted by the loss and boarding up of windows, loss of shingles, and general deterioration. Integrity of location, setting, and feeling have been lost due to the fact that the structure was likely moved from its original location, and due to the growth of a man camp in the vicinity.

ELIGIBILITY: Feature 2 has not been evaluated for eligibility to the National Register of Historic Places. Current survey data are not sufficient to determine significance. Until a deed search can be performed, avoidance is recommended.

NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature DataField Code MAC-NKL-56xSITS# 32 MZ**1. Feature Description, Integrity, Eligibility:**

DESCRIPTION: Feature 3 is a set of two identical grain bins at the south end of a linear grouping of six grain bins. Both bins are clad in corrugated metal, and stand approximately 20 feet tall. Each bin has a ribbed steel access door on its east facade. The northernmost of these bins is labeled "K2," while the door on the southernmost bin was ajar at the time of inventory, making it impossible to see its label. Secondary steel access doors and ladder rungs, quite rusted, are present on the roofs of both bins. The fill cap on the northernmost bin is damaged. A separate metal ladder leaned against the east side of the southernmost bin at the time of inventory, and a grain auger sat directly in front of both bins.

INTEGRITY: Feature 3 is in good condition and retains integrity of design, workmanship, and location. Integrity of materials has been impacted by the rusting of the ladder rungs, and the damaged fill cap on the northernmost bin. Integrity of setting and feeling have been reduced by the development of a man camp in the surrounding area.

ELIGIBILITY: Feature 3 has not been evaluated for eligibility to the National Register of Historic Places. Current survey data are not sufficient to determine significance. Until a deed search can be performed, avoidance is recommended.

Feature Preservation Recommendation(s) (Check all that apply):

- Individual nomination
- Contributes to a potential district
- No nomination potential
- Will not contribute to a district
- Potential district—feature would be a contributing element if other properties constitute a district
- Thematic nomination potential
- Component of a historic site or landscape
- Moved (specify all applicable choices)—a) relocation occurred within a historic period; b) recreates original site, orientation, landscape, & spatial relationships; c) compatible in context with neighboring structures; d) relocation has damaged eligibility
- Historical associations require further investigation

NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature DataField Code MAC-NKL-56xSITS# 32 MZ**1. Feature Description, Integrity, Eligibility:**

DESCRIPTION: Feature 4 is a set of two identical grain bins in the center of a linear grouping of six grain bins. Each cylindrical grain bin stands approximately 15 feet tall, and is clad in corrugated metal. Ribbed steel access doors are located on the east facade of each bin, with corresponding numbers written on them in black letters. These numbers begin with "K3" on the southernmost bin, while the bin directly to the north is labeled "K4." The access door on the southernmost bin is ajar, exposing the interior of the structure to the elements. Both bins have secondary access doors on the east face of the roof, along with four ladder rungs leading to the fill hole. Cylindrical fill caps cover the fill holes on both bins. There is light rust present on the roofs.

INTEGRITY: Feature 4 is in fair condition and retains integrity of location, design, and workmanship. Integrity of materials is slightly impacted by rust on the roofs. Integrity of setting and feeling have been reduced by the development of a man camp in the surrounding area.

ELIGIBILITY: Feature 4 has not been evaluated for eligibility to the National Register of Historic Places. Current survey data are not sufficient to determine significance. Until a deed search can be performed, avoidance is recommended.

NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature DataField Code MAC-NKL-56xSITS# 32 MZ**1. Feature Description, Integrity, Eligibility:**

DESCRIPTION: Feature 5 is a set of two identical grain bins at the north end of a linear grouping of six grain bins. Each cylindrical grain bin stands about 15 feet tall, and is clad in corrugated metal. Access doors of ribbed steel are located on the east facade of each bin, with black numbering on them. The southernmost is labeled "K5," while the northernmost is labeled "K6." There are no secondary access doors or ladder rungs on the roofs of these bins, and the fill caps are conical, differentiating them from those found on Feature 4. Heavy rusting is present on the roof of both bins.

INTEGRITY: Feature 5 is in fair condition, and retains integrity of location, design, and workmanship. Integrity of materials has been impacted by the rust on the roofs of both bins, while integrity of setting and feeling have been reduced by the development of a man camp in the surrounding area.

ELIGIBILITY: Feature 5 has not been evaluated for eligibility to the National Register of Historic Places. Current survey data are not sufficient to determine significance. Until a deed search can be performed, avoidance is recommended.

NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature DataField Code MAC-NKL-56xSITS# 32 MZ**1. Feature Description, Integrity, Eligibility:**

DESCRIPTION: Feature 6 is a two-stall garage, which is partially collapsed and largely obscured by overgrown weeds, trees, and bushes. The structure has a wood frame, and concrete blocks serve as the exterior. A pile of these blocks, from the collapsed portion of the building, is found at the north end of the structure. The garage has a side-gabled roof covered with corrugated metal, with rafter tails exposed on the east and west facades. Two garage door openings are located on the east facade, but the doors themselves are missing, exposing the structure to the elements. Portions of the roof are missing on the east side. The south facade appears to be clad in plywood, painted white, rather than the concrete blocks found on the rest of the structure. One wood-framed window is located on the east facade. No glass remains, but it could possibly have been a three-light fixed window, as evidenced by one remaining muntin.

INTEGRITY: Feature 6 is in poor condition, and retains integrity of location only. Integrity of materials, design, and workmanship are profoundly impacted by the loss of garage doors, collapse of the structure at the north end, holes in the roof, and general state of deterioration. Integrity of setting and feeling are lost due to the development of a man camp in the surrounding area.

ELIGIBILITY: Feature 6 has not been evaluated for eligibility to the National Register of Historic Places. Current survey data are not sufficient to determine significance. Until a deed search can be performed, avoidance is recommended.

2. Owner's Contact Information:

Private

3. Access (to rural areas):

From the center of Watford City, travel north on Main St. for .2 miles. Turn right onto ND-23 E/4th Ave NE, and follow for 3.2 miles. Turn left to stay on ND-23 E, and follow for 6.9 miles. Then, turn left onto 116 Ave NW, and travel north for .9 miles. Continue straight onto N Fork Rd for 423 feet, then turn left, and continue north for .2 miles. The site lead is located east of the road.

4. Site Area (ft²): 196,7635. Description of **SETTING**:

This site lead is located within a modern man camp, filled with modern trailers, campers, and vehicles which were occupied and not recorded at the time of inventory. Several small buttes are located to the northeast, while a gravel road is located to the east. The site lead is surrounded by trees and bushes.

**NDCRS ARCHITECTURAL SITE FORM
PAGE 5—SITE DESCRIPTION**Field Code MAC-NKL-56xSITS# 32 MZ**6. Summary of ALL Site Features & Evaluation of Significance:**

This site lead consists of five features. Feature 1 is a one-room schoolhouse, in fair condition, moved from its original location. Feature 2, located east of Feature 1, is another one-room schoolhouse, with a hipped roof, also moved from its original location. Feature 3 is a set of two identical grain bins, at the south end of a linear grouping of six grain bins. Feature 4 is a set of two identical grain bins in the center of this grouping. Feature 5 is a set of two identical grain bins, north of Feature 4. Feature 6 is a partially collapsed two-stall garage in poor condition.

The site lead has not been evaluated for eligibility to the National Register of Historic Places. Current survey data are not sufficient to determine significance. Until a deed search can be performed, avoidance is recommended.
