**NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature Data**Field Code Hensal Fire HallSITS# 32 PB**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a one room prairie school on a concrete foundation. This school was moved into Hensel to serve as a firehall. The roof of the building is covered with ribbed metal sheeting. There is a concrete chimney on the west slope of the roof. The soffits are open. The building measures 34 feet north to south and 30 feet east to west.

There is a wide trim board under the soffits on all four side of the school. The remainder of the siding is 4 inch wood lap with metal corner capping. On the south side there is one small double hung window, the east side has a bank of 5 large, three over two, windows with glass intact, also on the east side closer to the north end are two more similar windows. The north side has an overhead door on most of the east 1/3 of the building with another small double hung window. On the west side there are two more of the smaller windows, three over two and with glass intact, either side of an entry door. The door is inset with a porch roof supported by brackets giving some protection from weather. There is a 3 panel wood door that opens into a small entry. At either side of the entry are two small rooms which may have been used for coatrooms. The main body of the building has a concrete floor and beadboard ceiling. The walls have wallboard. There are no blackboards remaining. Light fixtures and exterior wiring suggest electricity.
