SITS# 32 RY 404

6. Summary of ALL Site Features & Evaluation of Significance:

Of the features described on the original site form, only the school appears to remain. The schoolhouse's exterior appearance indicates that it may have been converted into a residence. As a rural schoolhouse, the building has the potential for thematic nomination for the National Register of Historic Places. Because the interior could not be accessed during the current inventory, further survey would be required to determine the building's material integrity.

To reflect the loss of most originally-recorded buildings, Juniper recommends the site boundary be adjusted to include the school property only.

7. References/Comments:

School is feature #3, ABM

NORTH DAKOTA CULTURAL RESOURCES SURVEY
CONTINUATION FORM

Page 6
Site 32RY404

The second townsite of Grand Harbor was established in the spring of 1886 on the main line of the St. Paul, Minneapolis and Manitoba Railroad (Great Northern). The town was the successor of the original Grand Harbor one mile to the south, and became a center for trade and supply from 1887 to about 1915. By 1906, the new townsite included "a large central school, a Lutheran Church, hotel, two large general stores, three grain elevators, two dealers in farm implements, two blacksmiths, one livery barn and a public hall; also several fraternal societies." (North Dakota Magazine) The townsite seems to have grown in size and population until about 1910, when declining profitability of land and produce and an extensive fire in the business district began a rapid decline of the town itself. Remaining structures that may be associated with the townsite are the three buildings on the site, a grain elevator, and a railroad tower now located several miles to the south (see 32BE430).

Sources:

"A History of Counties" North Dakota Magazine Vol.1, No.3, (Bismarck: N.D. Commissioner of Agriculture and Labor, 1906) p.55. Harold E. Babcock, Historical Geography of Devils-Stump Lakes, North Dakota, Unpublished M.A. Thesis, University of Washington, 1952, p.186. A.T. Andreas, Historical Atlas of Dakota (Chicago: Lakeside Press, 1884).

School building is rather large wood-frame structure, somewhat maintained at this time. The structure sets on a concrete foundation, and there is likely a full basement. Exterior walls are 2½-3" shiplap painted white, and the building has been electrified. A brick chimney near the junction of the west and east pens and a fuel storage tank on the north side of the building indicate oil heating. All doors and windows are intact and entrance could not be made to the interior.

NORTH DAKOTA CULTURAL RESOURCES SURVEY
CONTINUATION FORM

Page 7
Site 32RY404

The well-house lies about 500m east of the school. The building is constructed of 2" X 4" wall studs covered exterior with shiplap and interior with ornate metal sheeting. It sits on a concrete slab approximately .6m thick. The roof is constructed of 2" X 4" joists, with the exception of the end joists which are 2" X 6", miter-jointed and covered with fitted 1" X 6" flatboard and wood shingles. Gable ends are about 4m to the peaks, and the north and south eave sides are about 3m above the ground level at the eaves. Roof overhangs .4m on eave sides, .28m on gable ends. An opening near the southwest corner of the roof is enclosed with 1" flatboard nailed vertically to form a chimney-like canal; this enclosed opening is directly above the well shaft. All corner and eaves are boxed.

Interior has concrete floor, antique pumpjack, stovepipe, and broken bottles. Heating method was stove, which vented into a brick chimney at about 1.8m above floor level at center of east wall; chimney exits at peak of roof at east wall.

NORTH DAKOTA CULTURAL RESOURCES SURVEY
CONTINUATION FORM

Page 8
Site 32RY404

The house-shed is to the northeast of the well-house, and contains three pens. The east pen is constructed of 2" X 6" and 2" X 4" studs and joists overlain with various 1" unfitted flatboard nailed vertically. The west pen is 2" X 4" studs and joists overlain with various widths and sizes of flatboard. No roof remains on east pen; west pen has 1" X 2" unfitted flatboard covered with metal sheeting. The central pen is constructed of cribbed 2" X 4"s to a height of 2m, above which rise gable ends constructed of 2" X 4" studs covered exterior with horizontal 1" X 12" flatboard. The floor to the central pen is heavy 2" X 12" planks, with no foundation or cellar visible. Roof joists of central pen are 2" X 6", covered with 1" X 12" flatboard and wood shingles. Doors and windows appear heavily altered, with various sizes of lumber used in jambs and sills. Door to central pen may not be heavily altered, measures .75m X 2m, and has antique hinges. All nails in the three pens are round wire type. Exterior walls of all three pens are covered with ornate sheet metal.
