**NDCRS ARCHITECTURAL SITE FORM**  
**PAGE 3—Feature Data**

Field Code Skogmo SchoolSITS# 32 SH**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a one room prairie school that has been moved from the original site. The present owners moved this school, also known at Granville Township School #4, to their farm from Section 20 of 149-76. They attended school when it was in that location. The school used to sit on a poured concrete basement. This school measures 34 feet 6 inches north to south and 24 feet east to west. The roof has asphalt shingles on the east facing and north facing segments of the roof and the west and south facing slopes, along with the dormer, have shakes. There is metal ridge cap running along all four corners of the roof as well as the dormer and the very top. There is brick chimney near the top of the roof at the southwest corner. The school is clad in 6 inch lap siding with 6 inch corner trim boards. Just under the edges of the roof there is an 8 inch trim board running all around the school. This trim board is just above cornice trim board that can be seen at the top of all the windows. There are two south facing double hung windows, either side of the entry door, another window in the entry that faces east and inside the school there is a bank of 6 windows facing east. All the windows have wide, cornice trim above them with wide, dark wood trim. At the southeast corner of the school there is an outdoor light and electrical wires seen on the south side. There are railroad ties for a step at the entry door. The entry door to the school is not original, probably built by the owners. Above the door is a fixed pane large window. Inside the entry are two more doors, one to the left as you step in and another at the east edge of the room that leads into the main body of the school. Both of those doors are 5 panel door with what looks like original hardware. The entry was the girls coat room and the door to the left led into the boys coat room. The floor in the entry and the school is hardwood and well kept. The ceiling is covered with panels of wall board while the walls are lathe and plaster. Light fixtures with white globes hang from the ceiling. The floor has an area that was filled in as they had a floor grate for heat. The blackboards run about 2/3 of the way along the north wall and perhaps 3/4 of the way along the west wall, meeting in the northwest corner. There is a trim board about 18 inches from the ceiling that runs all the way around the room. On the south wall of the class room there is smaller 5 panel door leading into a storage room. There is another blackboard that is between the entry door and the storage room door. This school closed in 1956.
