PAGE 3—Feature Data**Field Code Bergen SchoolSITS# 32 SK**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a one room prairie school moved to this location and placed on a concrete foundation. The gable roof is covered with asphalt shingles and there is a short, red brick chimney located at the east end of the roof at the peak. The soffits are closed. The building measures 30 feet east to west and 18 feet north to south.

There is a wide trim board under the soffits on the peak ends of the roof. The remainder of the siding is 6 inch wood lap with 4 inch wood corner trim with the exception of the east side where they have installed asbestos panels over the lap siding up to the bottom of the roof slope. There is an locked, solid core entry door on the west side. A double hung window is at the west end of the north wall and another small, 3 pane fixed window at the west end of the south wall. Also on the south wall 6 double hung, two over two, windows with storms over originals, all the glass intact. Window shade obscure most of the view into the school. The interior walls are covered with beadboard with wainscot at the lower 1/3. Could not see the ceiling. Floor is tongue and groove hardwood. A blackboard runs along the north wall. A door frame looks to lead into a coatroom on the west end of the school. Wiring to the school from a power pole suggests electricity at some point.
