1. Feature Description, Integrity, Eligibility:

This is a large, 32' by 22', building with an extra room to the east. The school is wood lap siding with a lot of paint still visible. It appears cared for. The roof is of asphalt shingles with a fairly modern looking chimney. They have installed eaves troughs along the south side and around corners on the east and west. It looks like there is venting on the south and north slopes of the roof. To the north of the school there is an outhouse.

On the west side is a meter for electricity and the hookup to a power pole. This building is still used as a township meeting hall. Also on the westside are shutters over 5 large windows. Two south facing windows are also covered. The small porch has corner pillars to hold the roof. These pillars sit on a large concrete step. The wood door could be original. There is a ramp to allow access for handicapped individuals.

On the east side of the school is one more window, also covered. According to a student of the school this window was in the entry. The bump out part of the school on this side was used for fuel storage. There is a small window in this addition and perhaps it was used to unload coal for the school.

In visiting with a student (I did not get into this school, it is locked) as you enter the school you are in the coatroom. The boys hung their coats on the west and the girls on the right. A door in the middle of the coatroom opened into the main body of the school. The floors are wood and I do not know what the walls are made of. I was told the windows slid up and down and the glass is still intact. They have installed electric heat to use for meetings.

This school closed in 1960. It was the largest school around.
