**1. Feature Description, Integrity, Eligibility:**

The feature is a wood framed, one room prairie school house perched on a concrete foundation. It looks like the foundation was poured in 4 pieces, perhaps like a pillar laying down. Each piece runs the length of the building and is about 8 inches wide. Two on the outer edges and two spaced under the building. The building was moved to the farm yard to be used as a granary. Previous to this it was located north about a mile and after closing as a school was used for living quarters. The roof has no chimney and is covered with asphalt shingles. The soffits are enclosed and there is an 8 inch trim board at each end under the roof. There is no evidence of the chimney location. The outside walls are 6 inch lap siding. A door was added at the east end of the building, perhaps the door to the south was the original entry. There are boards replacing all the windows and there looks to be two windows to the south, maybe one on the west end and another at the northeast corner. The interior of the building was gutted and divided for grain storage. The floor is cement.

The entry was removed from the school and is now a well house on this farm. The interior of the well house tells the story of the school with lathe and plaster walls.
