**NDCRS ARCHITECTURAL SITE FORM
PAGE 3—Feature Data**Field Code Traux (South)Township SchoolSITS# 32 WI**Complete a Page 3 for each feature.****1. Feature Description, Integrity, Eligibility:**

The feature is a one room prairies school on a poured concrete basement. The hip roof of the main boady and the gable roof of the entry are covered with asphalt shingles and the half hip roof of the addition is covered with wood shakes with some metal capping. There are two vent pipes high on the south slope of the school room roof. A red brick chimney is on the east slope of the roof. The building measures 20 feet north to south and 30 feet east to west. The addition measures 10 feet by 8 feet.

There is a wide trim board under the soffits at the top of the exterior wall. The remaining siding is 6 inch wood lap with 6 inch corner. The siding is beginning to fall away in places. The front of the entry has a tall triangular decorative piece, covered with shakes, with a half circle cut into it from the bottom. This extension of the roof is supported by two brackets on each side. In the half circle opening a small, two pane window can be seen on the entry wall. The entry door opening, reached by concrete steps to a stoop with pipe railings, has no door and broken sidelights at either side. There is a basement under the school and on the west end there is an outside staircase for access. The addition to the south has the toilets. The ceiling in the main school room has entirely disappeared. The walls are lathe and plaster on most walls with plywood on the south wall above the blackboards. There is more blackboard on the south half of the west wall. A broken glass block window is at the east end of the north wall, most likely the coat room, and there are two more large vented, broken, glass block windows on the north wall, likely replacments. The basement has two windows on both the north and south sides. The floor is tile over hardwood. Wiring inside and out suggest electricity.
