PAGE 3 – Feature DataField Code Eureka School #2SITS# 32 WIComplete one Page 3 for *each* architectural feature at the site.

1. Feature Description, Integrity, Eligibility:

The feature is a one room prairie school on a concrete basement. The gable roof is covered with failing wood shakes. There is a hole where the chimney used to sit on the east slope of the roof. The soffits are open and there are triangular braces, located at either side of the entry doors, supporting the east overhang. There is a smaller overhang on the west side of the school, also with triangular braces. This school measures 30 feet west to east and 20 feet north to south.

A rake board begins the siding on all four sides of the school. The remainder of the siding is 6 inch wood lap with 6 inch wood corner trim finished with a waterboard at the bottom of the walls. There are two entry doors on the east side of the school. They have three wood panels at the bottom and a 9 pane window at the top with some of the windows broken. In the middle of the east wall, between the doors, are two covered small window openings. On the west side there is a door opening that leads into a vestibule and another door into the school, this door is a 5 panel wood door. To the left as you enter the west door is a stairway to the basement. The coatrooms appear to be on the east side with entry doors from each of two rooms. All of the doors and windows have interior decorative cornices. On the south side there are six 9 over 9 windows with much of the glass missing. Three are shuttered. Above the windows is a small opening with no glass. There are window openings for the basement on the south and north walls. The interior walls and ceiling are finished with lathe and plaster. There is a picture rail running along three walls. Blackboards are found on the north wall and the east wall between the doors. The floor is narrow hardwood. No evidence of wainscot or electricity.

2. Owner's Contact Information:

Pederson Family Farm
